linkedin.com/atharav-narang
github.com/Atharav001
atharav001n.vercel.app

SKILLS

Languages

C/C++, Python, Java, Kotlin, SQL

Frameworks

TensorFlow, PyTorch, NumPy, OpenCV, Scikit-learn, Pandas, Jetpack Compose, Room, MediaPipe

Tools & Platforms

Antigravity, Opencode, Android Studio, Git/GitHub, Google Cloud

COURSEWORK

AI / ML

Supervised Machine Learning, Advanced Learning Algorithms, Unsupervised Learning

Core CS

Data Structures & Algorithms, Object-Oriented Programming, Retrieval-Augmented Generation

EDUCATION

B.Tech, Computer Science

Manipal Institute of Technology, Bengaluru

2025 – 2029

CBSE Class XII

M.M Public School, Delhi

Percentage: 85%

CBSE Class X

Montfort School, Delhi

Percentage: 88%

SUMMARY

Computer Science undergraduate focused on applied AI/ML and agentic systems. Builds end-to-end retrieval, verification, and automation pipelines – from multi-agent RAG frameworks to production-style claim verification and support-ticket triage – with an emphasis on measurable accuracy, latency, and reliability gains.

PROJECTS

Autonomous Research RAG Framework Python · FAISS · BM25 · Pydantic

GitHub Repository

- Built a multi-agent retrieval system on local inference models to autonomously synthesize research across large-scale arXiv databases.
- Designed a hybrid search pipeline with cross-encoder reranking and Pydantic validation to guarantee strict citation accuracy.
- Engineered a parallel evaluation engine running 7 agent configurations concurrently, cutting testing time by 70% with no quality degradation.

Multi-Modal Claim Verification Python · Gemini Flash · OpenAI SDK · VLM

GitHub Repository

- Developed an automated damage-claim pipeline that separates visual evidence from textual history to mitigate anchoring bias.
- Used Gemini Flash Lite for factual image extraction, routing structured outputs to an LLM for final claim evaluation.
- Added automated quality checks and strict rate-limiting, achieving 0% API errors and a 2.2x boost in classification accuracy.

AI Triage Agent Python · FAISS · Sentence-Transformers · OpenAI · RAG

GitHub Repository

- Built a terminal-based RAG agent using FAISS and Sentence-Transformers to intelligently index and route cross-product support tickets.
- Optimized the pipeline with multi-threaded processing and deterministic grounding, achieving complete local-context reliance and eliminating hallucinations.

WhatsApp Message Notification Router Python · OpenAI · faster-whisper

GitHub Repository

- Built a batch pipeline that routes WhatsApp messages (text, image, voice) to notify/digest/mute using sender trust, user behavior, and message content – built for HackerRank Orchestrate 2026.
- Combined deterministic rules with an LLM fallback for ambiguous cases, plus a hard safety layer that overrides any decision to mute known scam/spam senders.
- Achieved 100% routing accuracy on the labeled sample and zero safety violations across 110 messages processed.

CERTIFICATIONS

Google Cloud AI Workshop – Agentic AI, 2026

- Built agentic AI workflows using Python, LangChain, and Vertex AI on Google Cloud.

5-Day AI Agent Intensive Course – Kaggle, 2026

- Completed comprehensive training on designing, developing, and deploying autonomous AI agent workflows.
